TEST COMMENTS: *Jim commented that many of his soybeans are yielding in the mid 60s. This trial had very growthy plants ranging from 55- 60" tall. Most all varieties were lodged. Usually plants are lodged in one direction, but this site had varieties lodged in most every direction. Jim commented that fungicide was applied by plane and drift into neighboring corn remained healthier than rest of the field.*

† See last page for abbreviation descriptions. Results in **bold** are significantly above test average by LSD (0.10). **ns** = column values not significantly different.
