Test Comments: Linden said it rained a total of 35 inches from early May thru June. Spacious down out areas were present in many area fields. Linden mentioned another issue, soil compaction as soil was usually wet 2" below the surface during planting, playing a role most everywhere. Lodging was minimal, due mostly to stalk rot. Plant height and ear development was variable due to mentioned issues.

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceeded the grain moisture limit for this test. **ns** = column values not significantly different
